

CONTENTS

List of Symbols	xv
Preface	xix
Chapter 1 Basic Simulation Modeling	1
1.1 The Nature of Simulation	1
1.2 Systems, Models, and Simulation	3
1.3 Discrete-Event Simulation	6
1.3.1 Time-Advance Mechanisms	6
1.3.2 Components and Organization of a Discrete-Event Simulation Model	8
1.4 Simulation of a Single-Server Queueing System	10
1.4.1 Problem Statement	10
1.4.2 Intuitive Explanation	16
1.4.3 Program Organization and Logic	24
1.4.4 Python Program	29
1.4.5 Simulation Output and Discussion	34
1.4.6 Alternative Stopping Rules	36
1.4.7 Determining the Events and Variables	39
1.5 Simulation of an Inventory System	41
1.5.1 Problem Statement	42
1.5.2 Program Organization and Logic	44
1.5.3 Python Program	47
1.5.4 Simulation Output and Discussion	52
1.6 Steps in a Sound Simulation Study	54
1.7 Advantages, Disadvantages, and Pitfalls of Simulation	57
Appendix 1A: Fixed-Increment Time Advance	59
Appendix 1B: A Primer on Queueing Systems	60
1B.1 Components of a Queueing System	60
1B.2 Notation for Queueing Systems	61
1B.3 Measures of Performance for Queueing Systems	62
Problems	64

Chapter 2	Modeling and Analysis of Complex Systems	67
2.1	Introduction	67
2.2	A Manufacturing System Example	67
2.2.1	Determining the Numbers of Machines and Forklifts	71
2.2.2	The Effect of Changing the Control Logic	76
2.2.3	Determining the Effect of Increasing the Arrival Rate of Jobs	76
2.3	A Communications Network Example	77
2.3.1	Performance Analysis for the Existing Network	80
2.3.2	The Effect of Different Message Characteristics	81
2.3.3	The Effect of Additional SPs	82
2.4	A Supply Chain Model	83
	Appendix 2A: Determining the Warmup Period for the Manufacturing Example	87
	Problems	88
Chapter 3	Simulation Software	89
3.1	Introduction	89
3.2	Comparison of Simulation Packages with Programming Languages	90
3.3	Classification of Simulation Software	91
3.3.1	General-Purpose vs. Application-Oriented Simulation Packages	91
3.3.2	Modeling Approaches	91
3.3.3	Common Modeling Elements	93
3.4	Desirable Software Features	94
3.4.1	General Capabilities	94
3.4.2	Hardware and Software Requirements	96
3.4.3	Animation and Dynamic Graphics	96
3.4.4	Statistical Capabilities	97
3.4.5	Customer Support and Documentation	99
3.4.6	Output Reports and Graphics	99
3.5	Commercial Simulation Packages	100
3.5.1	AnyLogic	100
3.5.2	FlexSim	105
3.5.3	Simio	112
3.6	Other General-Purpose and Application-Oriented Simulation Packages	120
	Problems	120
Chapter 4	Review of Basic Probability and Statistics	121
4.1	Introduction	121
4.2	Random Variables and Their Properties	121
4.3	Simulation Output Data and Stochastic Processes	132
4.4	Estimation of Means, Variances, and Correlations	135
4.5	Confidence Intervals and Hypothesis Tests for the Mean	139

4.6	The Strong Law of Large Numbers	146
4.7	The Danger of Replacing a Probability Distribution by its Mean	146
	Appendix 4A: Comments on Covariance-Stationary Processes	147
	Problems	147
Chapter 5	Building Valid, Credible, and Appropriately Detailed Simulation Models	152
5.1	Introduction and Definitions	152
5.2	Guidelines for Determining the Level of Model Detail	155
5.3	Verification of Simulation Computer Programs	157
5.4	Techniques for Increasing Model Validity and Credibility	161
5.4.1	Collect High-Quality Information and Data on the System	161
5.4.2	Interact with the Manager on a Regular Basis	163
5.4.3	Maintain a Written Assumptions Document and Perform a Structured Walk-Through	163
5.4.4	Validate Components of the Model by Using Quantitative Techniques	165
5.4.5	Validate the Output from the Overall Simulation Model	166
5.4.6	Animation	173
5.5	Management's Role in the Simulation Process	173
5.6	Statistical Procedures for Comparing Real-World Observations and Simulation Output Data	173
5.6.1	Inspection Approach	174
5.6.2	Confidence-Interval Approach Based on Independent Data	177
5.6.3	Time-Series Approaches	179
5.6.4	Other Approaches	180
5.7	Summary of Techniques for Building Valid and Credible Models	181
	Appendix 5A: A Sample Assumption Document	181
5A.1	Problem Statement	181
5A.2	Assumptions Document	182
5A.3	Partial Validation of the Simulation Model	185
	Problems	186
Chapter 6	Selecting Input Probability Distributions	188
6.1	Introduction	188
6.2	Useful Probability Distributions	194
6.2.1	Parameterization of Continuous Distributions	194
6.2.2	Continuous Distributions	194
6.2.3	Discrete Distributions	214
6.2.4	Empirical Distributions	214

6.3	Techniques for Assessing Sample Independence	224
6.4	Activity I: Hypothesizing Families of Distributions	227
6.4.1	Summary Statistics	228
6.4.2	Histograms	230
6.4.3	Quantile Summaries and Box Plots	232
6.5	Activity II: Estimation of Parameters	237
6.6	Activity III: Determining How Representative the Fitted Distributions Are	241
6.6.1	Heuristic Procedures	242
6.6.2	Goodness-of-Fit Tests	251
6.7	The ExpertFit Software and an Extended Example	264
6.8	Shifted and Truncated Distributions	268
6.9	Bézier Distributions	271
6.10	Specifying Multivariate Distributions, Correlations, and Stochastic Processes	272
6.10.1	Specifying Multivariate Distributions	273
6.10.2	Specifying Arbitrary Marginal Distributions and Correlations	276
6.10.3	Specifying Stochastic Processes	277
6.11	Selecting a Distribution in the Absence of Data	278
6.12	Models of Arrival Processes	283
6.12.1	Poisson Processes	284
6.12.2	Nonstationary Poisson Processes	285
6.12.3	Batch Arrivals	287
6.13	Assessing the Homogeneity of Different Data Sets	288
	Appendix 6A: Tables of MLEs for the Gamma and Beta Distributions	289
	Problems	292
Chapter 7	Random-Number Generators	296
7.1	Introduction	296
7.2	Linear Congruential Generators	300
7.2.1	Mixed Generators	302
7.2.2	Multiplicative Generators	302
7.3	Other Kinds of Generators	304
7.3.1	More General Congruences	304
7.3.2	Composite Generators	304
7.3.3	Feedback Shift Register Generators	306
7.4	Testing Random-Number Generators	310
7.4.1	Empirical Tests	310
7.4.2	Theoretical Tests	315
7.4.3	Some General Observations on Testing	318
	Appendix 7A: Portable C Code for a PMMLCG	319
	Appendix 7B: Portable C Code for a Combined MRG	321
	Problems	323

Chapter 8	Generating Random Variates	326
8.1	Introduction	326
8.2	General Approaches to Generating Random Variates	328
8.2.1	Inverse Transform	328
8.2.2	Composition	336
8.2.3	Convolution	339
8.2.4	Acceptance-Rejection	340
8.2.5	Ratio of Uniforms	345
8.2.6	Special Properties	348
8.3	Generating Continuous Random Variates	350
8.3.1	Uniform	350
8.3.2	Exponential	350
8.3.3	m -Erlang	351
8.3.4	Gamma	351
8.3.5	Weibull	354
8.3.6	Normal	355
8.3.7	Lognormal	356
8.3.8	Beta	356
8.3.9	Pearson Type V	357
8.3.10	Pearson Type VI	357
8.3.11	Log-Logistic	358
8.3.12	Johnson Bounded	358
8.3.13	Johnson Unbounded	358
8.3.14	Bézier	358
8.3.15	Triangular	359
8.3.16	Empirical Distributions	359
8.4	Generating Discrete Random Variates	360
8.4.1	Bernoulli	361
8.4.2	Discrete Uniform	361
8.4.3	Arbitrary Discrete Distribution	361
8.4.4	Binomial	365
8.4.5	Geometric	366
8.4.6	Negative Binomial	366
8.4.7	Poisson	366
8.5	Generating Random Vectors, Correlated Random Variates, and Stochastic Processes	367
8.5.1	Using Conditional Distributions	367
8.5.2	Multivariate Normal and Multivariate Lognormal	368
8.5.3	Correlated Gamma Random Variates	369
8.5.4	Generating from Multivariate Families	370
8.5.5	Generating Random Vectors with Arbitrarily Specified Marginal Distributions and Correlations	370
8.5.6	Generating Stochastic Processes	371
8.6	Generating Arrival Processes	372
8.6.1	Poisson Processes	372

8.6.2	Nonstationary Poisson Processes	373
8.6.3	Batch Arrivals	375
	Appendix 8A: Validity of the Acceptance-Rejection Method	377
	Appendix 8B: Setup for the Alias Method	377
	Problems	378
Chapter 9	Output Data Analysis for a Single System	384
9.1	Introduction	384
9.2	Transient and Steady-State Behavior of a Stochastic Process	386
9.3	Types of Simulations with Regard to Output Analysis	389
9.4	Statistical Analysis for Terminating Simulations	392
9.4.1	Estimating Means	393
9.4.2	Estimating Other Measures of Performance	401
9.4.3	Choosing Initial Conditions	404
9.5	Statistical Analysis for Steady-State Parameters	405
9.5.1	The Problem of the Initial Transient	405
9.5.2	Repletion/Deletion Approach	413
9.5.3	Other Approaches for Means and Quantiles	418
9.6	Statistical Analysis for Steady-State Cycle Parameters	424
9.7	Multiple Measures of Performance	427
9.8	Time Plots of Important Variables	430
	Problems	432
Chapter 10	Comparing Alternative System Configurations	436
10.1	Introduction	436
10.2	Confidence Intervals for the Difference between the Expected Responses of Two Systems	439
10.2.1	A Paired- t Confidence Interval	440
10.2.2	A Modified Two-Sample- t Confidence Interval	441
10.2.3	Contrasting the Two Methods	442
10.2.4	Comparisons Based on Steady-State Measures of Performance	443
10.3	Confidence Interval for the Difference between Probabilities for Two Systems	444
10.4	Confidence Intervals for Comparing More Than Two Systems	445
10.4.1	Comparisons with a Standard	445
10.4.2	All Pairwise Comparisons	447
10.4.3	Multiple Comparisons with the Best	448
10.5	Ranking and Selection	449
10.5.1	Selecting the Best of k Systems	449
10.5.2	Selecting a Subset of Size m Containing the Best of k Systems	454

10.5.3 Additional Problems and Methods	456
Appendix 10A: Validity of the Selection Procedures	459
Appendix 10B: Constants for the Selection Procedures	460
Problems	462
Chapter 11 Variance-Reduction Techniques	463
11.1 Introduction	463
11.2 Common Random Numbers	464
11.2.1 Rationale	464
11.2.2 Applicability	465
11.2.3 Synchronization	467
11.2.4 Some Examples	471
11.3 Antithetic Variates	478
11.4 Control Variates	483
11.5 Indirect Estimation	489
Problems	492
Chapter 12 Experimental Design and Optimization	496
12.1 Introduction	496
12.2 2^k Factorial Designs	498
12.3 2^{k-p} Fractional Factorial Designs	513
12.4 Response Surfaces and Metamodels	520
12.4.1 Introduction and Analysis of the Inventory Model	520
12.4.2 Analysis of the Predator-Prey Model	530
12.4.3 Space-Filling Designs, Kriging, and Neural Networks	534
12.4.4 Comparison of the Metamodels for the Predator-Prey Model	545
12.5 Simulation-Based Optimization	547
12.5.1 Optimum-Seeking Methods	549
12.5.2 Optimum-Seeking Packages Interfaced with Simulation Software	549
Problems	557
Chapter 13 Agent-Based Simulation and System Dynamics	560
13.1 Introduction	560
13.2 Agent-Based Simulation	561
13.2.1 Detailed Examples	566
13.2.2 Time-Advance Mechanisms for ABS	573
13.2.3 Summary of ABS	575
13.3 Continuous Simulation	575
13.3.1 System Dynamics	576
13.4 Combined Discrete-Continuous Simulation	581
13.5 Monte Carlo Simulation	582

13.6 Spreadsheet Simulation	584
Problems	586
Chapter 14 AI/Machine Learning Meets Simulation Modeling	588
14.1 Introduction	588
14.2 Applications of Machine Learning to Simulation and Vice Versa	589
14.3 Overview of Reinforcement Learning	590
14.4 Value-Based Methods and Q -Learning	592
14.5 Policy-Based Methods and Proximal Policy Optimization	605
14.6 Software for Reinforcement and Machine Learning	609
14.6.1 Open-Source RL Libraries	609
14.6.2 Commercial RL Software	610
14.6.3 Support for RL/ML Provided by Discrete-Event Simulation Software	610
Problems	611
Appendix	613
References	617
Index	645
